INTRODUCTION & DISCLAIMER

INTRODUCTION

- Project Kkakdugi is a community-driven memecoin project operating on the Kaia blockchain.
- Token lineup: \$KKAK (flagship), plus themed family tokens \$KKAKDOG and \$KKAKDUCK.
- Legacy: active since the Klaytn era; the project continues on Kaia following the Klaytn–Finschia merger.
- Kkakdugi aims to energize the Kaia ecosystem by boosting community engagement through collaborations and events with a wide range of projects.

DISCLAIMER

(Disclaimer)

This document is for informational purposes only and does not constitute investment, legal, or financial advice.

Crypto-assets and on-chain activities involve volatility and technical and market risks.

All figures are based on a snapshot and are subject to change, with no obligation to provide updates.

(Key Risks)

Market risk: token prices can be highly volatile, and liquidity conditions may change rapidly.

Smart contract risk: despite on-chain transparency and ownership renouncement where applicable, vulnerabilities or unexpected behaviors may exist.

DEX/liquidity risk: trading can be affected by pool liquidity, price impact, MEV, routing, or exchange/aggregator availability.

Chain/network risk: Kaia network performance, consensus, outages, or ecosystem dependencies may impact transactions and user experience.

Operational risk: burn timing/schedule and community operations may vary; treasury management choices can affect community trust and outcomes.

(BURN / FEE MECHANISM)

- On the primary DEX pool(s) (DragonSwap), the trading fee for \$KKAK and \$KKAKDOG is set to 1%.
- Tokens accrued from trading fees in \$KKAK and \$KKAKDOG are burned.
- Burns are typically executed during the first week of each month (schedule may vary depending on operations).
- Burns are executed on-chain to reduce totalSupply (not by sending to a dedicated burn-only address).

\$KKAK DISTRIBUTION

\$KKAK — DISTRIBUTION

Category	Amount	Share
Burned (Net Burned; supply reduction)	58,416,866,582.96260111	87.71%

VESTING & LOCKUPS / MINTING

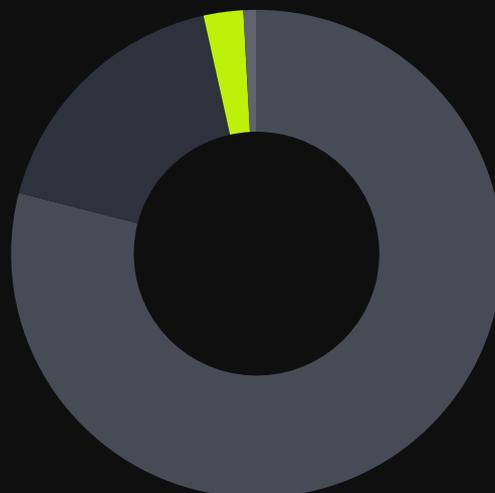

No vesting or lockup schedule is enforced on-chain at the token-contract level; distribution is market-driven.

No additional minting is possible under Kaiafun’s policy.

Supply is fixed at the final total supply after bonding-curve completion.

APPENDIX

APPENDIX A — DEFINITIONS

Current Total Supply:

on-chain totalSupply value at the snapshot point in time.

Gross Burned:

cumulative burned amount based on on-chain events (where applicable; for \$KKAK, this may include dead-address transfers and operational recovery transactions where noted).

Net Burned:

Initial Minted Supply – Current Total Supply (supply-reduction basis).

APPENDIX B — NOTES FOR \$KKAK GROSS VS NET BURN

Gross Burned is cumulative burn-event based; it can differ from supply reduction due to dead-address transfers and operational recovery transactions.

Allocation tables use Net Burned to keep totals consistent vs initial supply.
